

Eastern Idaho - 2018

This was a first time test on potatoes for a grower in eastern Idaho. He used 1 pint in furrow at mark-out, mixed in with other items and covered a 40 acre test plot (yes, with one pint!)

Other than the one pint of OII-YS, all other elements were exactly the same. While digging for moisture several weeks before harvest, grower was amazed at the treated vs. untreated root sets (reference photo).

Per grower, he believes his one pint is going to net him an extra \$4,000. Profit Projection:

Processor 20-25, \$17.50, another 20 sacks at \$6, 180 more per acre, @ 40 acres.

...extra \$4,000 from one pint of OII-YS.
